Addressing the urgency of radical decarbonization as a mitigative response to climate risk, this book explores how business can respond to the challenges of climate risk, through various transformational processes. Those processes involve cognitive transformations, organizational changes, climate risk integration into risk management practices, shifts in corporate reporting and disclosure as

well as futuristic scenario-based planning beyond normal business planning cycles. Though much has already been written on corporate sustainability efforts, there is a greater need now for building mitigative capacity at the firm level, in alignment with shifting policy and regulatory regimes. Theoretical and empirical work on these areas is addressed in the novel thought experiment approach of this book. A research agenda for future work is provided.

This book provides an up-to-date guide to managing Country Risk. It tackles its various and interlinked dimensions including sovereign risk, socio-political risk, and macroeconomic risk for foreign investors, creditors, and domestic residents. It shows how they are accentuated in the global economy together with new risks such as terrorism, systemic risk, environmental risk, and the rising trend of global volatility and contagion. The book also assesses the limited usefulness of traditional yardsticks of Country Risk, such as ratings and rankings, which at best reflect the market consensus without predictive value and at worst amplify risk aversion and generate crisis contamination. This book goes further than comparing a wide range of risk management methods in that it provides operational and forward-looking warning signs of Country Risk. The combination of the authors' academic and market-based backgrounds makes the book a useful tool for scholars, analysts, and practitioners.

Strategic Corporate Social Responsibility: Sustainable Value Creation (Sixth Edition) redefines corporate social responsibility (CSR) as being central to the value-creating purpose of the firm. Based on a theory of empowered stakeholders, this bestselling text argues that the responsibility of a corporation is to create value, broadly defined. The primary challenge for managers today is to balance the competing interests of

the firm's stakeholders' understanding that what they expect today may not be what they will expect tomorrow. This tension is what makes CSR so complex and demanding, but it is also what makes CSR integral to the firm's strategy and day-to-day operations. In this new Sixth Edition, author David Chandler explores issues around COVID-19, the BLM movement, the supply chain crunch, and the "great resignation."

Bad Day in Blackrock

Academic Press
This publication serves as a roadmap for exploring and managing climate risk in the U.S. financial system. It is the first

major climate publication by a U.S. financial regulator. The central message is that U.S. financial regulators must recognize that climate change poses serious emerging risks to the U.S. financial system, and they should move urgently and decisively to measure, understand, and address these risks. Achieving this goal calls for strengthening regulators' capabilities, expertise, and data and tools to better monitor, analyze, and quantify climate risks. It calls for working closely with the private sector to ensure that financial institutions and market participants do the same. And it calls for policy and regulatory choices that are flexible,

open-ended, and adaptable to new information about climate change and its risks, based on close and iterative dialogue with the private sector. At the same time, the financial community should not simply be reactive—it should provide solutions. Regulators should recognize that the financial system can itself be a catalyst for investments that accelerate economic resilience and the transition to a net-zero emissions economy. Financial innovations, in the form of new financial products, services, and technologies, can help the U.S. economy better manage climate risk and help channel more capital into technologies essential for the transition. <https://doi.org/10.5281/zenodo.5247742>
