10 Chi-Square Tests and the F-Distribution A Chi-Square Goodness-of-Fit Test is used to test whether a frequency distribution fits an expected distribution. To calculate the test statistic for the chi-square goodness-of-fit test, the observed frequencies and the expected frequencies are used. Chapter 10 Chi-Square Tests and the F-Distribution Chapter 10 Chi Square Tests 10.1 Introduction The statistical inference of the last three chapters has concentrated on statistics such as the mean and the proportion. These summary statistics have been used to obtain interval estimates and test hypotheses concerning population parameters.
