Cooperative and Work-Integrated Education in Asia

Routledge

It has been over a century since "Cooperative System of Education," a work-study programme for higher education, was initiated by Herman Schneider at University of Cincinnati in the United States. Today, it is known as "Cooperative Education" which is commonly included within the umbrella term of "Work-Integrated Learning" and broadly referred to by the World Association of Cooperative Education (WACE) as "Cooperative and Work-Integrated Education (CWIE)". Its development worldwide has been closely related to the socioeconomic background of the region. This book offers the first attempt to focus on the development of CWIE in Asia. To date, the development of CWIE in the Asia region has been slow compared to their counterparts. The analysis follows international comparisons of China, Japan, Korea, Hong Kong, Vietnam, Thailand, Malaysia, and Singapore on their educational history, vocational education, CWIE, and future issues. Although the level of development varies among them, there is no doubt that this region as a whole is experiencing a

rapidly growing global demographic and economic prominence. CWIE can, and to some extent already does, play an important, supportive role as part of growth. The book goes on to conclude that in order to enable further successful expansion of CWIE, and improve its best practice, it is imperative to establish national and regional associations for CWIE, as well as establish collaborative research activities across the region with governmental funding support.

How is practical change work carried out in modern organizations? And what kind of challenges, tasks and other difficulties are normally encountered as a part of it? In a turbulent and changing world, organizational culture is often seen as central for sustained competitiveness. Organizations are faced with increased demands for change but these are often so challenging that they meet heavy resistance and fizzle out. Changing Organizational Culture encourages the

development of a reflexive approach to organizational change, providing insights as to why it may be difficult to maintain momentum in change processes. Based around an illuminating case study of a cultural change programme, the book provides 15 lessons on the entire change journey; from analysis and design, to implementation and how organizational members should approach change projects. This enhanced edition considers the most recent studies on organizational change practice, with new examples from businesses and the public sector, and includes one empirical study which uses the authors' own framework, enriching their practical recommendations. It also draws on the latest theoretical developments, including ideas of power and storytelling. Accompanying the text is an online pedagogic and research ideas guide available for course instructors and lecturers at Routledge.com. Changing Organizational Culture will be vital reading for students, researchers and practitioners working in organizational studies, change management and HRM.

This major text by the author of Mass Communication Theory offers a comprehensive analysis of the growing field of assessment and evaluation of the performance of mass media. Across different societies, with varying media systems, there is evidence of increasing concern with the nature and quality of media output as well as about the independence and diversity of media systems. In this broad-ranging overview, Denis McQuail outlines the varying means of media performance assessment which have been attempted. He analyzes the central questions of what the 'public interest' means in this context, which criteria are relevant for assessing media performance, how such values are established and how they can be reconciled with the economic,
