 An exploration of how plant behavior and adaptation offer valuable insights for human thriving. We know that plants are important. They maintain the atmosphere by absorbing carbon dioxide

and producing oxygen. They nourish other living organisms and supply psychological benefits to humans as well, improving our moods and beautifying the landscape around us. But plants don't just passively provide. They also take action.
 Beronda L. Montgomery explores the vigorous, creative lives of organisms often treated as static and predictable. In fact, plants are masters of adaptation.

They "know" what or who they are, and they use this knowledge to make a way in the world. Plants experience a kind of sensation that does not require eyes or ears. They distinguish kin, friend, and foe, and they are able to respond to ecological competition despite lacking the capacity of fight-or-flight. Plants are even capable of transformative behaviors that allow them to maximize

their chances of survival in a dynamic and sometimes unfriendly environment. Lessons from *Plants* enters into the depth of botanic experience and shows how we might improve human society by better appreciating not just what plants give us but also how they achieve their own purposes. What would it mean to learn from these organisms, to become more aware of our environments and to adapt to our own

worlds by calling on perception and awareness rather than reason? Montgomery's meditative study puts before us a question with the power to reframe the way we live: What would a plant do? **The Private Life of Plants** White Owl In this book, a leading plant scientist offers a new understanding of the botanical world and a passionate argument for intelligent plant life. Are

plants intelligent? Can they solve problems, communicate, and navigate their surroundings? For centuries, philosophers and scientists have argued that plants are unthinking and inert, yet discoveries over the past fifty years have challenged this idea, shedding new light on the complex interior lives of plants. In *Brilliant Green*, leading scientist Stefano Mancuso presents a

new paradigm in our understanding of the vegetal world. He argues that plants process information, sleep, remember, and signal to one another--showing that, far from passive machines, plants are intelligent and aware. Part botany lesson, part manifesto, Brilliant Green is an engaging and passionate examination of the inner workings of the plant kingdom.--

Inner Traditions / Bear & Co
In this New York Times bestseller, the White House chief usher for

nearly three decades offers a behind-the-scenes look at America's first families. J. B. West, chief usher of the White House, directed the operations and maintenance of 1600 Pennsylvania Avenue—and coordinated its daily life—at the request of the president and his family. He directed state functions; planned parties, weddings and funerals, gardens and playgrounds, and extensive renovations;

and, with a large staff, supervised every activity in the presidential home. For twenty-eight years, first as assistant to the chief usher, then as chief usher, he witnessed national crises and triumphs, and interacted daily with six consecutive presidents and first ladies, as well as their parents, children and grandchildren, and houseguests—including friends, relatives, and heads of

state. J. B. West, whom Jackie Kennedy called “one of the most extraordinary men I have ever met,” provides an absorbing, one-of-a-kind history of life among the first ladies. Alive with anecdotes ranging from Eleanor Roosevelt's fascinating political strategies to Jackie Kennedy's tragic loss and the personal struggles of Pat Nixon, *Upstairs at the White House* is a rich

account of a slice of American history that usually remains behind closed doors. The Secret Life of Plants Other Press, LLC An accessible and compelling story of a scientist's discovery of plant communication and how it influenced her research and changed her life. In this "phytobiography"--a collection of stories written in partnership with a plant--research

scientist Monica Gagliano reveals the dynamic role plants play in genuine first-hand accounts from her research into plant communication and cognition. By transcending the view of plants as the objects of scientific materialism, Gagliano encourages us to rethink plants as people--beings with subjectivity, consciousness, and volition, and hence having the capacity for

their own perspectives and voices. The book draws on up-close-and-personal encounters with the plants themselves, as well as plant shamans, indigenous elders, and mystics from around the world and integrates these experiences with an incredible research journey and the groundbreaking scientific discoveries that emerged from it.

Gagliano has published numerous peer-reviewed scientific papers on how plants have a Pavlov-like response to stimuli and can learn, remember, and communicate to neighboring plants. She has pioneered the brand-new research field of plant bioacoustics, for the first time experimentally demonstrating that plants emit their own 'voices' and, moreover, detect and respond to the

sounds of their environments. By demonstrating experimentally that learning is not the exclusive province of animals, Gagliano has re-ignited the discourse on plant subjectivity and ethical and legal standing. This is the story of how she made those discoveries and how the plants helped her along the way. [The Nation of Plants](#) Island Press Sunday Times Bestseller 'A

paradigm-smashing chronicle of joyous entanglement' Charles Foster Waterstones Non-Fiction Book of the Month (September) Are trees social beings? How do trees live? Do they feel pain or have awareness of their surroundings? *Lessons from Plants* Timber Press In the Secret Life of Your Cells, Robert B. Stone, Ph.D., explores the latest research of Cleve

Backster, who by attaching a lie-detector to the leaf of a plant discovered that it had feelings and the ability to read our thoughts. Now this ability - primary perception - has been traced over to disconnected single cells of our own bodies. What millions of Americans saw reported on TV's Incredible Sunday, Dr. Stone now shares in depth in *The Secret Life of Your Cells*. The

implications and possibilities of that discovery, and the difficult struggle it has had in finding acceptance in the tradition-bound scientific community makes exciting, challenging, mind-expanding reading. [The Secret Life of an Arable Field](#) books catalog We barely talk about them and seldom know their names. Philosophy has always overlooked them; even

biology considers them as mere decoration on the tree of life. And yet plants give life to the Earth: they produce the atmosphere that surrounds us, they are the origin of the oxygen that animates us. Plants embody the most direct, elementary connection that life can establish with the world. In this highly original book, Emanuele Coccia argues that, as the very creator of atmosphere, plants occupy the

fundamental position from which we should analyze all elements of life. From this standpoint, we can no longer perceive the world as a simple collection of objects or as a universal space containing all things, but as the site of a veritable metaphysical mixture. Since our atmosphere is rendered possible through plants alone, life only perpetuates itself through the very circle of

consumption undertaken by plants. In other words, life exists only insofar as it consumes other life, removing any moral or ethical considerations from the equation. In contrast to trends of thought that discuss nature and the cosmos in general terms, Coccia's account brings the infinitely small together with the infinitely big, offering a radical redefinition of the place of humanity

within the realm of life. An Exploration into the Wonder of Plants Vintage In this playful yet informative manifesto, a leading plant neurobiologist presents the eight fundamental pillars on which the life of plants—and by extension, humans—rests. Even if they behave as though they were, humans are not the masters of the Earth, but only one of its most irksome residents. From the moment of

their arrival, about three hundred thousand years ago—nothing when compared to the history of life on our planet—humans have succeeded in changing the conditions of the planet so drastically as to make it a dangerous place for their own survival. The causes of this reckless behavior are in part inherent in their predatory nature, but they also depend on our total

incomprehension of the rules that govern a community of living beings. We behave like children who wreak havoc, unaware of the significance of the things they are playing with. In *The Nation of Plants*, the most important, widespread, and powerful nation on Earth finally gets to speak. Like attentive parents, plants, after making it possible for us to live, have come to our aid once

again, giving us their rules: the first Universal Declaration of Rights of Living Beings written by the plants. A short charter based on the general principles that regulate the common life of plants, it establishes norms applicable to all living beings. Compared to our constitutions, which place humans at the center of the entire juridical reality, in conformity with an anthropocentrism that

reduces to things all that is not human, plants offer us a revolution. From the Cosmos to the Kitchen Counter, the Big Consequences of Little Things Penguin
 "Within a day of receiving this book, I had consumed it... Absorbing, moving, and compulsively readable."—Lydia Davis In this affectionate, heart-warming chronicle, Rosamund Young distills a lifetime of organic farming wisdom,

describing the surprising personalities of her cows and other animals At her famous Kite's Nest Farm in Worcestershire, England, the cows (as well as sheep, hens, and pigs) all roam free. They make their own choices about rearing, grazing, and housing. Left to be themselves, the cows exhibit temperaments and interests as diverse as our own. "Fat Hat" prefers men to women; "Chippy

Minton" refuses to sleep with muddy legs and always reports to the barn for grooming before bed; "Jake" has a thing for sniffing the carbon monoxide fumes of the Land Rover exhaust pipe; and "Gemima" greets all humans with an angry shake of the head and is fiercely independent. An organic farmer for decades, Young has an unaffected and homely voice. Her

prose brims with genuine devotion to the wellbeing of animals. Most of us never apprehend the various inner lives animals possess, least of all those that we might eat. But Young has spent countless hours observing how these creatures love, play games, and form life-long friendships. She imparts hard-won wisdom about the both moral and real-world benefits of organic farming. (If

preserving the dignity of animals isn't a good enough reason for you, consider how badly factory farming stunts the growth of animals, producing unhealthy and tasteless food.) This gorgeously-illustrated book, which includes an original introduction by the legendary British playwright Alan Bennett, is the summation of a life's work, and a delightful and moving tribute

to the deep richness of animal sentience. [A Metaphysics of Mixture](#) North Atlantic Books "Blooming with photos, illustrations, and botanical paintings, McDowell's gorgeous book opens an ivy-covered door to new information about one of the world's most famous authors."—Angelica Shirley Carpenter, editor of *In the Garden* New York Times bestselling author Marta McDowell has revealed the

way that plants have stirred some of our most cherished authors, including Beatrix Potter, Emily Dickinson, and Laura Ingalls Wilder. In her latest, she shares a moving account of how gardening deeply inspired Frances Hodgson Burnett, the author of the beloved children's classic *The Secret Garden*. In *Unearthing The Secret Garden*,

McDowell delves into the professional and gardening life of Frances Hodgson Burnett. Complementing her fascinating account with charming period photographs and illustrations, McDowell paints an unforgettable portrait of a great artist and reminds us why *The Secret Garden* continues to touch readers after more than a century. This deeply moving and gift-

worthy book is a must-read for fans of *The Secret Garden* and anyone who loves the story behind the story.

wildflowers, to the wide variety of animals, farmland birds, insects, butterflies and moths that they support; and how they depend on each other; and are all vital for the wonderful environment we need to thrive and enjoy. The book focuses on the relationship between these key species, how they work together and interact with their environment in order to survive. It is about the eco-

system and how they all link together, and how every species, no matter how seemingly insignificant, plays a vital part in the food-chain and ultimate survival of all species. For every species referred there is a photograph detailing it, with over 120 color images throughout the book. The animals and birds that live within this habitat are reported on and the insects; including detailed

analysis of bumblebees, honeybees and ants, as well as more hidden species such as the earthworm, are described in their role in life, with in-depth facts and photos. Wildlife, such as badgers, muntjacs, hedgehogs and fallow deer and their habits are detailed, along with birds that survive on farmland and are now sadly becoming rare. Included in this range are corn buntings,

skylarks, goldfinches, kestrels, yellow wagtails and jackdaws, although there are many more. The main aim of this book is to give a detailed description of the private life of these creatures and show how they depend upon and work together in harmony, creating the environment that we are so adeptly eradicating. The Government have set out a package of reforms to deliver

300,000 new homes a year by the mid-2020s. Our havens of nature are being destroyed and this book will examine, with photographs and text, what really makes the field a special place, both for wildlife and humans alike. *How They Live and Why They Matter* Penguin
Plants have profoundly moulded the Earth's climate and the evolutionary trajectory of life. Far from being 'silent

witnesses to the passage of time', plants are dynamic components of our world, shaping the environment throughout history as much as that environment has shaped them. In *The Emerald Planet*, David Beerling puts plants centre stage, revealing the crucial role they have played in driving global changes in the environment, in recording hidden facets of Earth's history, and in helping us to predict its

future. His account draws together evidence from fossil plants, from experiments with their living counterparts, and from computer models of the 'Earth System', to illuminate the history of our planet and its biodiversity. This new approach reveals how plummeting carbon dioxide levels removed a barrier to the evolution of the leaf; how plants played a starring role in pushing

oxygen levels upwards, allowing spectacular giant insects to thrive in the Carboniferous; and it strengthens fascinating and contentious fossil evidence for an ancient hole in the ozone layer. Along the way, Beerling introduces a lively cast of pioneering scientists from Victorian times onwards whose discoveries provided the crucial background to these and the other puzzles. This

understanding of our planet's past sheds a sobering light on our own climate-changing activities, and offers clues to what our climatic and ecological futures might look like. There could be no more important time to take a close look at plants, and to understand the history of the world through the stories they tell.
