Quizá usted tenga un buen conocimiento de los mercados. Puede que incluso conozca a sus principales actores, sepa cuándo comprar, cuándo vender y qué acciones tienen un mejor potencial. Pero ¿hasta que punto se conoce usted a sí mismo? Hasta los traders más astutos, motivados y válidos pueden ver entorpecida su actividad por un tipo de pensamiento contraproducente que conduce a tomar malas decisiones y a cometer errores. En esos casos, sufren de incapacidad

para permanecer concentrados con objetividad o carecen de la necesaria confianza para ejecutar sus operaciones correctamente. O tienen arraigadas profundas contradicciones y errores conceptuales sobre el trading o la naturaleza de las reglas del mercado en la elección de valores. Como resultado de ello, un porcentaje extremadamente alto de traders pierde todo o gran parte de su dinero durante el primer año de su actividad de trading. Mark Douglas, presidente de Trading Behavior Dynamics y prestigiosa figura de la enseñanza en el campo del trading en algunas de las más importantes sociedades de Wall Street, ha dedicado los últimos veinte años a ayudar a los traders a desarrollar confianza, disciplina y a adoptar una actitud ganadora que les pueda permitir dominar el mercado. Para Douglas, maximizar una actitud mental adecuada es clave para conseguir buenos resultados y resulta ser mucho más importante que los análisis de mercados o los diversos "sistemas" que se ponen de moda periódicamente. Enseña a los traders a

pensar en términos de probabilidades y a tener las convicciones fundamentales necesarias para adquirir una “mentalidad ganadora”. Los traders “en la zona”, es decir, aquellos con este tipo de mentalidad, no precisan saber –y no les importa– que ocurrirá en los mercados acto seguido ya que ellos saben lo que van a hacer a continuación. Y eso es lo que hace la diferencia.

A step-by-step system for mastering trading psychology. Think about your most costly and recurring trading mistakes. Chances are that they're related to common errors, such as chasing price, cutting winners short, forcing mediocre trades, and overtrading. You've likely tried to fix these errors by improving your technical skills, and yet they persist. That's because the real source of these mistakes is not technical—they actually stem from greed, fear, anger, or problems with confidence and discipline. If you are like most traders, you probably overlook or misunderstand mental and emotional obstacles. Or worse, you might think you know how to manage them, but you don't, and end up losing control at the worst possible time. You're leaving too much money on the table, which will either prevent you from being profitable or realizing your potential. While many trading psychology books offer sound advice, they don't show you how to do the necessary work. That's why you haven't solved

the problems hurting your performance. With straight talk and practical solutions, Jared Tendler brings a new voice to trading psychology. In *The Mental Game of Trading*, he busts myths about emotions, greed, and discipline, and shows you how to look past the obvious to identify the real reasons you're struggling. This book is different from anything else on the market. You'll get a step-by-step system for discovering the cause of your problems and eliminating them once and for all. And through real stories of traders from around the world who have successfully used Tendler's system, you'll learn how to tackle your problems, improve your day-to-day performance, and increase your profits. Whether you're an independent or institutional trader, and regardless of whether you trade equities, forex, or cryptocurrencies, you can use this system to improve your decision-making and execution. Finally, you have a way to reach your potential as a trader. Now's the time to make it happen.
[How to Day Trade](#) Harper Collins

detailed descriptions, including more than 550 mathematical formulas, for more than 150 trading strategies across a host of asset classes and trading styles. These include stocks, options, fixed income, futures, ETFs, indexes, commodities, foreign exchange, convertibles, structured assets, volatility, real estate, distressed assets, cash, cryptocurrencies, weather, energy, inflation, global macro, infrastructure, and tax arbitrage. Some strategies are based on machine learning algorithms such as artificial neural networks, Bayes, and k-nearest neighbors. The book also includes source code for illustrating out-of-sample backtesting, around 2,000 bibliographic references, and more than 900 glossary, acronym and math definitions. The presentation is intended to be descriptive and pedagogical and of particular interest to finance practitioners, traders, researchers, academics, and business school and finance program students.

Andrew Aziz describes technology, strategy, and

psychology as the three essential pillars of successful trading, and he knows that the psychological aspects of trading are the most likely to be underestimated or even ignored. He wrote *Mastering Trading Psychology* to help traders enhance their understanding of this crucial pillar of trading and to strengthen their "mental skills" in order to maximize their performance. This practical and highly entertaining book takes its readers inside the minds of ordinary retail traders who contributed more than 175 accounts of their successes, their failures, their joys, their struggles, and, most of all, what they have learned as traders. Some are experienced, but many are relative beginners. They represent an intriguing diversity in terms of where they live, their ages, their levels of education, their everyday jobs, and how they tell their stories. All are members of Andrew's trading community, and their enthusiastic response to his invitation to share their experiences and insights was overwhelming. Complemented by Andrew's explanatory

text, the stories are told in the contributors' own words, minimally edited for length, clarity, and privacy.
