Successful treatment of skin infections relies on accurate and swift diagnosis, and visual inspection remains the most important means to that end. This book provides a pictorial guide to the diagnosis of common bacterial, fungal, and viral skin infections, as well as of arthropods of medical importance. The text is divided into chapters by class of organism, and in each chapter by clinical entity. It will be of lasting value to dermatologists and general physicians in practice and training.

Now in its fourth edition, this best-selling book is fully updated to address the ever increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing community pharmacists to manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely. Government policy now encourages chronic disease management as a self-care activity, and could well be the largest area for future growth of reclassification of medicines.

Pharmacists, now more than ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment. *Community Pharmacy* is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners. Key features Guidance for arriving at a differential diagnosis Practical prescribing tips Trigger points for referral boxes Other hints and

tips boxes Specific questions to ask boxes Case studies Self-assessment questions Consistent approach gives: Anatomy overview History taking and physical examination Prevalence and epidemiology Aetiology Arriving at a differential diagnosis Clinical features Conditions to eliminate Likely causes Unlikely causes Very unlikely causes Evidence base for OTC medicine Practical prescribing and product selection More on the examination of eyes, ears and mouth New sections on future-proofing (vaccinations etc.) New material covering inter-professional education for clinical skills. Written by an internationally renowned researcher and teacher, this book provides a compendium of syndromes and dermatologic conditions. Completely revised and updated, the second edition includes genetic information, the genes and their loci, and the genetic linkage of certain syndromes that are now grouped with other diseases. The book retains the popular format of the first edition and includes color pictures of key syndromes from one of the major collections in the U.S. These features combine to make it an important book for office-based dermatologists who frequently see these problems in their practice and for dermatology residents who need this information to pass their boards. Describing some 716 syndromes in crisp detail with lavish color illustrations. A feature of special value is the list of carefully selected references quoted at the end of each entry to give the user ready access to definitive further reading on each syndrome. For residents and attending physicians alike, remembering and recognizing the variety of dermatologic syndromes that have been identified is a very difficult and time-

consuming task. An Illustrated Dictionary of Dermatologic Syndromes provides a systematic and concise approach to the subject and is a valuable aid to both residents and attending

physicians in dermatology and pediatrics. In his Foreword, Dr. Walter B. Shelley calls this, "a great book for browsing...a symphony of syndromes."
