Hyperspectral narrow-band (or imaging spectroscopy) spectral data are fast emerging as practical solutions in modeling and mapping vegetation. Recent research has demonstrated the advances in and merit of hyperspectral data in a range of applications including quantifying agricultural crops, modeling forest canopy biochemical properties, detecting crop stress and disease, mapping leaf chlorophyll content as it influences crop production, identifying plants affected by contaminants such as arsenic, demonstrating sensitivity to plant nitrogen content, classifying vegetation species and type, characterizing wetlands, and mapping invasive species. The need for significant improvements in quantifying, modeling, and mapping plant chemical, physical, and water properties is more critical than ever before to reduce uncertainties in our understanding of the Earth and to better sustain it. There is also a need for a synthesis of the vast knowledge spread throughout the literature from more than 40 years of research. Hyperspectral Remote Sensing of Vegetation integrates this knowledge, guiding readers to harness the capabilities of the most recent advances in applying hyperspectral remote sensing technology to the study of terrestrial vegetation. Taking a practical approach to a complex subject, the book demonstrates the experience, utility, methods and models used in studying vegetation using hyperspectral data. Written by leading experts, including pioneers in the field, each chapter presents specific applications, reviews existing state-of-the-art knowledge, highlights the advances made, and provides guidance for the appropriate use of hyperspectral data in the study of vegetation as well as its numerous applications, such as crop yield modeling, crop and vegetation biophysical and biochemical property characterization, and crop moisture assessment. This comprehensive book brings together the best global expertise on hyperspectral remote sensing of agriculture, crop water use, plant species detection, vegetation classification, biophysical and biochemical modeling, crop productivity and water productivity mapping, and modeling. It provides the pertinent facts, synthesizing findings so that readers can get the correct picture on issues such as the best wavebands for their practical applications, methods of analysis using whole spectra, hyperspectral vegetation indices targeted to study specific biophysical and biochemical quantities, and methods for detecting parameters such as crop moisture variability, chlorophyll content, and stress levels. A collective "knowledge bank," it guides professionals to adopt the best practices for their own work.

No previously published work has so comprehensively compiled essential information as this, covering almost 10,000 vascular plants of commercial importance throughout the world. For each plant the accepted scientific name, synonyms, common names, economic uses, and geographical distribution are provided. World Economic Plants: A Standard Reference provides the broad coverage needed in a global economy. It includes information garnered during more than two decades of research on economic plants. The information given conforms to all international standards for botanical data and results from an extensive review of literature and the input of numerous agricultural and botanical scientists. This book is invaluable to everyone dealing with economic vascular plants, be they from research or commerce including international agriculture, horticulture, or government. *Plantation Economy in India* Scientific Publishers
 Turmeric has been used as a medicine, a condiment, and a dye since at least 600 B.C., while ginger has been used extensively throughout history for its medicinal purposes. The Agronomy and Economy of Turmeric and Ginger brings these two important plants together in one reference book, explaining their history, production techniques, and nutritional and medicinal properties in detail. This book is intuitively organized by plant and use, allowing quick access to information. It puts the uniquely Indian use and history of turmeric and ginger plants into a global context of production and economic aspects. It explores the plants from a botanical perspective, and goes into details of their chemical composition as well. Rounding out the book are chapters on disease and pest control issues. The book is a valuable resource for those involved in the production and marketing of these plants, as well as those looking for more information on the medicinal and nutritional properties of turmeric and ginger. - The first book to bring together extensive information about turmeric and ginger - Incorporates medicinal, nutritional and agricultural aspects of the two plants - Offers a global perspective
Agricultural Economics Research in Asia and the Far East Springer Nature

A unique, unified and a single source laboratory handbook; providing handy analytical procedures on the gamut of important, diagnostic medicinal and economic plant chemicals. More than 300 experiments on about 70 groups of phytochemicals in about 100 important plants are explained in an understandable way. A brief review on the chemistry, various types of extraction, solvents used and important analytical instruments are specified in the beginning of the book. The experiments range from simple paper and TLC chromatographic procedures to advanced GC and

HPLC methods, therefore, the experiments can be easily selected depending on the availability of instruments with oneself. This book will be a valuable handbook for all the ayurvedic and herbal manufacturers throughout the world for their quality control procedures; and for courses on biochemistry, botany, pharmacy, biotechnology and organic chemistry. This can also serve as a reference book for phytochemistry, economic botany, medicinal plants and researchers.

Analytical Methods for Medicinal Plants and Economic Botany
 Prem Jose

One such crop is arecanut in the west coast and in the north-east. An attempt is made in this book to study the cultivation and marketing of arecanut in the producing and consuming centers. This book will be of great value for those interested in the marketing of agricultural commodities especially with regard to arecanut.

Socio-Economic Impact Study with Concurrent Evaluation on Agriculture/Horticulture based Schemes SAGE

Major tree crops contribute substantially to the economy of many developing countries on the Asian, African and Latin American continents. For example, coffee is the main revenue earner for Kenya. This book provides a comprehensive review of the agronomy, botany, taxonomy, genetics, chemistry, economics, and future global prospects of a range of crops that have great food, industrial and economic value such as cocoa, coffee, cashew, oil palm and natural rubber. - Discusses the major tree crops of great economic value to the developing world - The author is an eminent scientist who has won numerous awards for his work in this area

Soil Health Management for Plantation Crops Taylor & Francis
 North-East India, comprising the seven contiguous states around Assam, the principal state of the region, is a relatively unknown, yet very fascinating region. The forest clad peripheral mountains, home to indigenous peoples like the Nagas, Mizos and the Khasis, the densely populated Brahmaputra valley with its lush green tea gardens and the golden rice fields, the moderately populated hill regions and plateaus, and the sparsely inhabited Himalayas, form a unique mosaic of natural and cultural landscapes and human interactions, with unparalleled diversity. The book provides a glimpse into the region's past and gives a comprehensive picture of its physical environment, people, resources and its economy. The physical environment takes into account not only the structural base of the region, its physical characteristics and natural vegetation but also offers an impression of the region's biodiversity and the measures undertaken to preserve it. The

people of the region, especially the indigenous population, inhabiting contrasting environments and speaking a variety of regional and local dialects, have received special attention, bringing into focus the role of migration that has influenced the traditional societies, for centuries. The book acquaints the readers with spatial distribution, life style and culture of the indigenous people, outlining the unique features of each tribe. The economy of the region, depending originally on primitive farming and cottage industries, like silkworm rearing, but now greatly transformed with the emergence of modern industries, power resources and expanding trade, is reviewed based on authentic data and actual field observations. The epilogue, the last chapter in the book, summarizes the authors' perception of the region and its future.

Among the 17 Sustainable Development Goals (SDGs), SDG 1 envisages end of poverty in all its forms everywhere and SDG 2 envisages zero hunger and achieve food security and improved nutrition and promote sustainable agriculture. In order to achieve the SDGs 1 and 2, Govt. of India has launched different agricultural and horticultural scheme to protect the loss of farmers. These schemes are implemented in the states of India with the initiatives of the state governments. The book is highlighted on the socio-economic impact study with concurrent evaluation on Agriculture/Horticulture based Schemes implemented in the state Tripura. The book is focused mainly on two aspects viz; evaluation of the agriculture and horticulture based schemes and impact of the schemes on the socio-economic life of the tribal farmers. The basic objectives of this book are to assess whether the tribal farmers are benefitted or not from the different schemes implemented by the government and to assess the impact of these schemes in order to improve the socio-economic condition of the tribal farmers. In addition to this, productivity of the different agriculture/horticulture production produced by the tribal beneficiaries is examined and socio-economic problems faced by the rural tribal people are investigated. The book is expected to be valuable to the policy maker for taking the appropriate policy decisions further and it would be a bench mark to the researchers who will work on the tribal issues and agriculture.

The hill chain of Western Ghats, a treasure trove of biodiversity and the water tower of peninsular India has been engrossed the attention of various stakeholders all over the world. This region is identified as one among the eight hottest hotspots of biodiversity and hence attracted worldwide attention. This book is a compilation of various research articles related to Western Ghats, its ecology, environment, geography, biodiversity, etc. The editors have taken utmost care to include articles related to various issues such as, the debates over WGEEP and HLWG reports, studies on mining and quarrying activities, agriculture and allied

activities, issues related to sustainable agricultural practices, agrarian distress, impact of migration, changing land use pattern, other economic activities and its impact on the environment and ecology, etc. The book offers an insight into the concerns of the farmers and offers policy solutions wherever possible.

Economics of Arecanut Cultivation in Karnataka Springer Science & Business Media

A working group of sixteen experts from seven countries re-evaluated the evidence of the carcinogenicity of betel-quid and areca-nut chewing and some areca-nut related nitrosamines. Betel-quid and areca-nut chewing are widely practised in many parts of Asia and in Asian-migrant communities elsewhere in the world. There are hundreds of millions of users worldwide. They evaluated betel quid with tobacco as carcinogenic to humans (Group 1) on the basis of sufficient evidence of an increased risk of cancer of the oral cavity, pharynx and oesophagus. The working group reviewed epidemiological studies of human cancer, mainly studies from India, Pakistan and Taiwan (China). Studies on betel quid with tobacco and areca nut with tobacco in experimental animals now also provide sufficient evidence of carcinogenicity. The working group also evaluated betel quid without tobacco as carcinogenic to humans (Group 1), on the basis of sufficient evidence of an increased risk of oral cancer. Studies on betel quid without tobacco and areca nut without tobacco in experimental animals now also provide sufficient evidence of carcinogenicity. Areca nut, a common ingredient of betel quid and many different chewing preparations, including those available commercially, has been observed to cause oral submucous fibrosis

Ever since the National Commission on Agriculture emphasized the need to increase the importance of plantation crops, there has been a phenomenal growth in the area of major plantation crops like tea, coffee, rubber, cashewnut and cocoa. The area increase in these crops has been over 25 per cent of the projections. This study analyses the prospects of coffee, cocoa, rubber, pepper and cardamom crops besides touching upon tea, coconut, cashewnut and arecanut as to their status and performance.

This textbook has been designed to meet the needs of B.Sc. Second Semester students of Botany for the University of Jammu under the recommended National Education Policy 2020. This textbook comprehensively covers the theoretical and practical aspect of the paper Economic Botany and Plant Conservation. The theory part of the text introduces the students to understand the value of plants as sources of food, fodder, spices and drugs. The book also discusses the need to conserve the sustainable use of plants and design strategies for their effective conservation. Practical part has been presented systematically to help students achieve sound conceptual understanding and learn experimental procedures.

The First International Conference on Science, Technology and Multicultural Education (ICOCIT-MUDA), initiated by Universitas Pendidikan Muhammadiyah (UNIMUDA) Sorong. It was July 25th-26th, 2019, in Sorong, West Papua, Indonesia. Currently, the Rector of UNIMUDA Sorong is Rustamadji, Ph.D; he is the first rector of the university. He encouraged the Institute of Research, and Community Service to run the academic event. Then, the committee usefully run The First ICOCIT-MUDA as the premier event since the university convert from college to university. The First International Conference ICOCIT-MUDA was the collaboration with Universitas Muhammadiyah Surakarta, Universitas Prof. Dr. Moestopo (Beragama) and Forum Dosen Indonesia, West Papua. The conference was supported by generosity of Badan Pemeriksa Keuangan RI attend as Keynote Speaker, Prof. Dr. Bahrullah Akbar. Prof. Dr. Joko Harun (Universitas Muhammadiyah Surakarta, Indonesia) presents a paper as a Keynote Speaker. Moreover, he leads the scientific committee during the paper publication preparation. Dr. Andriansyah (Vice Rector Universitas Prof. Dr. Moestopo (Beragama), also presented a paper on plenary session). The collaboration was supported by Universiti Sultan Zainal Abidin, Malaysia (Prof. Dr Dato Yahaya Ibrahim), and Universiti Brunei Darussalam (Prof. Dr. Gamal Abdul Nasir). Both universities send their academician to present paper as keynote speakers. Sekolah Tinggi Keguruan dan Ilmu Pendidikan (STKIP) Muhammadiyah Sorong was established on August 19, 2004. Then, July 5, 2018 converted to Universitas Pendidikan Muhammadiyah Sorong. The Rector explained that the short name is UNIMUDA where the civitas academia is always young and the only one that they have spirit as young people.
