Workers' Compensation Index: A Topical Guide to California Workers'

Compensation Law (formerly Work Comp Index) is a valuable research tool for anyone involved in handling California workers' compensation cases. The book and its Table of Contents, both of which are set up alphabetically by subject, serve as a quick reference tool and a starting point for more in-depth legal research. The California workers' compensation system has changed so rapidly in substantive and procedural areas that its participants have been inundated with information from many sources. This topical guide leads its users simply, directly, and quickly to the applicable statutory and case law and rules and to a wide variety of key publications, texts, and treatises that have treated the entire range of issues

and developments in the field.

Princeton Review

Over the past two decades, experimental economics has moved from a fringe activity to become a standard tool for empirical research. With experimental economics now regarded as part of the basic tool-kit for applied economics, this book demonstrates how controlled experiments can be a useful in providing evidence relevant to economic research. Professors Jacquemet and L'Haridon take the standard model in applied econometrics as a basis to the methodology of controlled experiments. Methodological discussions are illustrated with standard experimental results. This book provides future experimental practitioners with the means to construct experiments that fit their research question, and new comers with an understanding of the strengths and weaknesses of controlled experiments. Graduate students and academic researchers working in the field of experimental economics will be able to learn how to undertake, understand and criticise empirical research based on lab experiments, and refer to specific experiments, results or designs completed with case study applications.

In recent years, a lively debate ensued

on an old issue, namely the proper distinction between semantics and pragmatics against the background of the classical Gricean distinction between what is said and what is implicated .

From a linguist s point of view, however, there has always been a regrettable lack of empirical data in this otherwise sophisticated debate. Recently, a new strand of research emerged under the name of experimental pragmatics, the attempt to gain experimental data on pragmatic and semantic issues by using psycholinguistic and neurolinguistic methods. This volume brings together work by scholars engaging in experimental research on the semantics/pragmatics distinction. The contribution of experimental pragmatics to pragmatic and semantic theory is discussed from a number of different angles, ranging from implicature and pragmatic enrichment to pragmatic acquisition, pragmatic impairment, and pragmatic processing. In addition, methodological issues are discussed. The contributions will appeal to theoretical linguists, psycholinguists, neurolinguists, and language philosophers."

Laboratory Manual for Science is a series of five books for classes 6 to 10. These are complimentary to the Science textbooks of the respective classes. The manuals cover a wide range of age-appropriate experiments that give hands-on experience to the students. The experiments help students verify scientific truths and principles, and at the same time, expose them to the basic tools and techniques used in scientific investigations. Our manuals aim not only to help students better comprehend the scientific concepts taught in their textbooks but also to ignite a scientific quest in their young inquisitive minds.
