This volume contains papers mainly focused on ICT for Computation, Algorithms and Data Analytics etc.

Industrial Psychology Upkar Prakashan

"A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszez and Kleiner, 2001

The most important corporate resource over the next few years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology-Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges, recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their

presence in India owing to the increasing cost pressures in US and Europe. This has increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India by the year 2012 and demand will out-pace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower. Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company

on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to "fit in" with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the same pool of talent and skills as their foreign counterparts to remain competitive and survive in global and domestic markets.

Rethinking the future of India through automation. From scavenging to lunar missions, from railway factories to healthcare and even tax planning, automation is growing faster and deeper in India than is visible. In a country where more than a million people get ready for jobs every month, this rise in automation can appear as an unwelcome change or a threat to their livelihood. But the reality is that automation is enhancing efficiency, accuracy and accountability of India's working professionals in ways that haven't been seen before. Automation is helping generate information in a data-poor country. It is making India's private sector more active and government's functioning more transparent and reliable. Through several case studies of private enterprises and government departments, India Automated chronicles the transformation that India is undergoing and how robotics and process automation are infusing proficiency in our work and personal lives. Automation is turning to be one of the most impactful results of the Fourth Industrial Revolution technologies in India. AI, drones, blockchain, cybersecurity, 3D printing, augmented and virtual reality include automated processes. These are also opening new

categories of employment for job seekers. This book argues for deeper collaboration between industrial and government sectors to ensure that automation enhances India's steady growth while also mitigating its negative impact. With this forward-looking approach, Pranjali Sharma brings us face to face with the reality that it is imperative for India to align itself with this revolution.

Challenges in a Changing World TCS Ninja National Qualifier Test (NQT) 2021 | 10 Mock Test + 12 Sectional Test
We are now going through a sustainability revolution that will rival the agricultural and industrial revolutions in the way it will transform society. Innovation and creativity will be needed to develop radical, new products that are less damaging to the environment and generate new business and jobs. The book is of interest to all business and management students, academicians, researchers, practitioners, consultants, corporate managers, governments, non-governmental organizations and international organizations with special interest in issues relating to HRM for sustainability. The book is centered on the theme of HRM and sustainability. The authors have pulled different strings of HRM enabling sustainability from the designing and assembling the HR functions for sustainability to creating sustainable culture to best practices in HRM for sustainability. The authors have shared various perspectives in terms of the role of HRM for sustainability from culture building to employer branding to employee engagement. The authors have also reflected upon the role of HRM in managing future workforce and creating conducive and sustainable employee relations.

Information and Communications Security Readworthy

This book constitutes the refereed proceedings of the 12th International Conference on Information and Communications Security, ICICS 2010, held in Barcelona, Spain, in December 2010. The 31 revised full papers presented together with an invited talk were carefully reviewed and selected from 135 submissions. The papers are organized in topical sections on access control, public key cryptography and cryptanalysis, security in distributed and mobile systems, cryptanalysis, authentication, fair exchange protocols, anonymity and privacy, software security, proxy cryptosystems, and intrusion detection systems.

Healthcare sectors often deal with a large amount of data related to patients' care and hospital workforce management. Mistakes occur, and the impending results are disastrous for individuals' personal identity information. However, an innovative and reliable way to safeguard the identity of individuals and provide protection of medical records from criminals is already in effect. Design and Implementation of Healthcare Biometric Systems provides innovative insights into medical identity theft and the benefits behind biometrics technologies that could be offered to protect medical records from hackers

and malicious users. The content within this publication represents the work of ASD screening systems, healthcare management, and patient rehabilitation. It is designed for educators, researchers, faculty members, industry practitioners, graduate students, and professionals working with healthcare services and covers topics centered on understanding the practical essence of next-generation healthcare biometrics systems and future research directions.

Globalization requires effective international and cross-cultural collaboration. When project teams from Western cultures first come into contact with colleagues from the Indian IT and BPO industry, prejudices against the new and unknown are typically amplified. This book is a start on the journey of cultural appreciation for managers, project leaders, and offshore coordinators working together with Indians. It is also a resource for business managers and company strategists seeking to understand the softer aspects behind the headlines that the Indian IT and BPO industry so frequently creates. Being both academically well researched and an account of the author's many years of personal experience in India, the book opens with a description of cultural dimensions that help to break down culturally driven matters. It provides background information about

India as a country and a social system. Examining the development and current status of India's IT and BPO industry, it moves on to describe the dynamics of its workforce. The book then provides practical information on how to communicate, negotiate, and interact with Indian colleagues, and intelligently utilize expatriates. It closes by formulating recommendations for a more effective collaboration.

This book showcases cutting-edge research papers from the 6th International Conference on Research into Design (ICoRD 2017) - the largest in India in this area - written by eminent researchers from across the world on design process, technologies, methods and tools, and their impact on innovation, for supporting design for communities. While design traditionally focused on the development of products for the individual, the emerging consensus on working towards a more sustainable world demands greater attention to designing for and with communities, so as to promote their sustenance and harmony - within each community and across communities. The

special features of the book are the insights into the product and system innovation process, and the host of methods and tools from all major areas of design research for the enhancement of the innovation process. The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area, with the largest collection of research from India. For practitioners and educators, it is exposure to an empirically validated suite of theories, models, methods and tools that can be taught and practiced for design-led innovation. The contents of this volume will be of use to researchers and professionals working in the areas on industrial design, manufacturing, consumer goods, and industrial management.

Business India WIPO

The first report in a new flagship series, WIPO Technology Trends, aims to shed light on the trends in innovation in artificial intelligence since the field first developed in the 1950s.
