network management system (NMS) is a critical element in realizing ROI and is used to support the five major network management functional areas. In many cases, more than one system is needed to realize the overall NMS capability. The five functional areas of network management for MPLS are known by the acronym FCAPS: Fault. Network Management and MPLS | Introduction | InformITAs mentioned earlier, the MIB defines managed objects in a conceptual way, including the syntax and semantic information about each object. These managed objects can then be instantiated as real objects in an agent host device. Figure 2-5 is an extract from one of the draft MPLS MIBs [IETF-TE-MPLS] taken from the IETF Web site.
