HUERTA MCCONNELL

*Steel Designers'
Manual* Wiley-Blackwell
In 2010 the then
current European
national standards for
building and
construction were
replaced by the EN
Eurocodes, a set of

pan-European model
building codes
developed by the
European Committee
for Standardization.
The Eurocodes are a
series of 10 European
Standards (EN 1990 -
EN 1999) that provide
a common approach
for the design of
buildings, other civil
engineering works and
construction products.

The design standards embodied in these Eurocodes will be used for all European public works and are set to become the de-facto standard for the private sector in Europe, with probable adoption in many other countries. This classic manual on structural steelwork design was first published in 1955, since when it has sold many tens of thousands of copies worldwide. For the seventh edition of the Steel Designers' Manual all chapters have been comprehensively reviewed, revised to ensure they reflect current approaches and best practice, and brought in to compliance with EN 1993: Design of Steel Structures (the so-called Eurocode 3).

Steel Designer's Manual John Wiley & Sons

This classic manual on structural steel design provides a major source of reference for structural engineers

and fabricators working with the leading construction material. Based fully on the concepts of limit state design, the manual has been revised to take account of the 2000 revisions to BS 5950. It also looks at new developments in structural steel, environmental issues and outlines the main requirements of the Eurocode on structural steel.
