An engaging and enlightening account of taxation told through lively, dramatic, and sometimes ludicrous stories drawn from around the world and across the ages Governments have always struggled to tax in ways that are effective and tolerably fair. Sometimes they fail grotesquely, as when, in 1898, the British ignited a rebellion in Sierra Leone by imposing a tax on huts—and, in repressing it, ended up burning the very huts they intended to tax.

Sometimes they succeed astonishingly, as when, in eighteenth-century Britain, a

cut in the tax on tea massively increased revenue. In this entertaining book, two leading authorities on taxation, Michael Keen and Joel Slemrod, provide a fascinating and informative tour through these and many other episodes in tax history, both preposterous and dramatic—from the plundering described by Herodotus and an Incan tax payable in lice to the (misremembered) Boston Tea Party and the scandals of the Panama Papers. Along the way, readers meet a colorful cast of tax rascals, and even a few tax heroes. While it is hard to fathom the inspiration behind such taxes as one on ships that tended to make them sink, Keen and Slemrod show that yesterday's tax systems have more in common with ours than we may think. Georgian England's window tax now

seems quaint, but was an ingenious way of judging wealth unobtrusively. And Tsar Peter the Great's tax on beards aimed to induce the nobility to shave, much like today's carbon taxes aim to slow global warming. *Rebellion, Rascals, and Revenue* is a surprising and one-of-a-kind account of how history illuminates the perennial challenges and timeless principles of taxation—and how the past holds clues to solving the tax problems of today.

Two tiny trilobites in a vast Cambrian ocean drift past sea cucumber parasols and a shaggy, tree-like sponge. Snail tracks loop enigmatically against brushed-gray Silurian slate, and ghostly white crinoids feather a Devonian

seascape. A delicate pterosaur flies bravely into the Jurassic gloom, while a Tyrannosaurus rex so big that its teeth fill our field of vision stalks the deep orange sands that mark the end of the Cretaceous period. These are just a few scenes from the magnificent drama that unfolds in glorious full color and three-dimensional texture in *Rock of Ages*, *Sands of Time*. Each of Barbara Page's 544 contiguous painted panels represents a million years of the history of life on earth, with fossil plants and animals depicted at the same scale and in association with each other just as they might be found by a paleontologist in the field. A muted rainbow of background colors evoke the rocks in which the fossils were found—the Texas Red Beds, for instance, or the yellow

Solnhofen limestone—and keystone events are shown metaphorically, with fat rolls of paint marking major extinctions or continental drift. To fully experience the awesome impact of an eon's worth of time spread across 500 feet of bas-relief panels, you'd have to visit the Museum of the Earth in Ithaca, New York, where Page's specially commissioned work will be installed when the museum opens in 2002. But this book is the next best thing. Not only does it contain crisp color reproductions of each painting, but it also includes an accessible essay from paleontologist Warren Allmon giving the scientific context behind the art. For fossil lovers of all ages, and anyone interested in the merging of art and science, *Rock of Ages*, *Sands of Time* will be the find of a

lifetime.

Although proposals for "flat" taxes have received a good deal of attention, a

majority of Americans say that, for reasons of fairness, they favor a progressive tax. The USA Tax: A Progressive Consumption Tax presents an alternative to both the present tax system and a flat tax. The USA (unlimited savings allowance) tax is a progressive consumption tax that differs fundamentally from our current tax structure in that it taxes consumption rather than income. In April 1995, the USA tax bill was introduced into the United States Senate. Whatever the fate of the bill, this book is an important contribution to the literature on the theory and design of a progressive consumption tax. The USA tax has two components—the household tax, which replaces the current household income tax, and the business tax, which

replaces the corporate income tax. A fundamental purpose of the USA tax is to raise the level of national saving and investment. It accomplishes this by making all household saving and business investment in capital goods tax-deductible. Seidman describes the ideals on which the USA tax is founded: the household component is based on the progressive personal consumption tax, and the business component is based on the consumption-type value-added tax (VAT). He then shows how the version of the USA household tax presented in the 1995 bill differs in critical aspects from the ideal of a personal consumption tax, and how it can be improved by amendments. Seidman devotes most of his book to the impact on saving, the issue of fairness,

practical design options, simplification, and a variety of questions and criticisms. The book, written in straightforward language, will help guide the non-economist through the coming debates on the USA tax.
