CONNER MORA

Digitization of Economy and Society
Brooks/Cole Publishing Company
The politics of West Bengal was long known for the uninterrupted rule of the Left Front from 1977 to 2011. For a long period, the politics of the state was

marked by overt absence of caste-, religion- and ethnicity-based contestations and this made West Bengal an exceptional case. Adopting a historical and comparative approach, the book traces the changing nature of politics of West Bengal since the late 1990s. It documents how economic and social degeneration in the state led to increasing caste and identity assertions

and left-wing extremist politics. It chronicles the history of the social movements at Singur and Nandigram that ultimately challenged the Left hegemony and initiated the much talked-about poriborton (change) in West Bengal politics. With the help of the unique data sets of National Election Studies, the book closely analyses the shifting nature of state-level political dynamics under the rule of the All India Trinamool Congress (AITC) in the context of broader socio-economic changes. The book presents emerging party competition in the state marked by the eclipse of both the Left and the Congress and the arrival of the BJP.

Charged particle imaging has revolutionized experimental studies of photodissociation and bimolecular collisions. Written in a tutorial style by some of the key practitioners in the field, this book gives a comprehensive account of the technique and describes many of its applications. The book is split into two parts. Part I is intended as a series of tutorials. It explains the basic principles of the experiment and the numerical methods involved in interpreting experimental data. Part II describes a number of different applications. These chapters are more directly research oriented, the aim being to introduce the reader to the possibilities for future experiments. This

comprehensive book will be of primary interest to researchers and graduate students working in chemical and molecular physics who require an overview of the subject as well as ideas for future experiments.

University Press

This text blends traditional introductory physics topics with an emphasis on human applications and an expanded coverage of modern physics topics, such as the existence of atoms and the conversion of mass into energy. Topical coverage is combined with the author's lively, conversational writing style, innovative features, the direct and clear manner of presentation, and the emphasis on problem solving and

practical applications.

 Outraged conscience, careful argument,

poetry and political analysis -- gathered here is the diversity of voices, traditions, and approaches that are weaving themselves into an anti-nuclear and peace movement in India and Pakistan. In these essays, written before, during, and after the May 1998 nuclear explosions, scholars and activists from both countries attempt to understand and challenge the nuclearisation of South Asia. The essays are an act of resistance against governments that see nuclear weapons as a currency of power, as symbols of prestige, as sources of security, as moments of glory in an otherwise dismal contemporary history. The collection includes Mahatma Gandhi's response to the atomic bombing of Hiroshima, and recent writings by renowned scholars Eqbal

Ahmad, Rajni Kothari, Ashis Nandy, and Amartya Sen, as well as Arundhati Roy and veteran anti-nuclear activists, academics and journalists. The volume also contains the texts of many of the historic public statements protesting the May 1998 nuclear tests which helped mobilise public opposition to the bomb in South Asia. There is a resource guide to books, films and websites on nuclear weapons, as well as information on many organisations now working on this issue.

Indian National Bibliography New Delhi : National Book Trust, India

This book discusses the study and analysis of the physical aspects of social systems and models, inspired by the analogy with familiar models of physical systems and possible applications of

statistical physics tools. Unlike the traditional analysis of the physics of macroscopic many-body or condensed matter systems, which is now an established and mature subject, the upsurge in the physical analysis and modelling of social systems, which are clearly many-body dynamical systems, is a recent phenomenon. Though the major developments in sociophysics have taken place only recently, the earliest attempts of proposing "Social Physics" as a discipline are more than one and a half centuries old. Various developments in the mainstream physics of condensed matter systems have inspired and induced the recent growth of sociophysical analysis and models. In spite of the tremendous efforts of many scientists in recent years, the subject is

still in its infancy and major challenges are yet to be taken up. An introduction to these challenges is the main motivation for this book.

Issues for 1919-47 include Who's who in India; 1948, Who's who in India and Pakistan.

The Calendar

This new volume looks at a selection of important issues resulting from the digitization of society, which has fundamentally transformed organizations. These new technological innovations are creating new opportunities as well as new challenges. This volume considers the emerging

paradigm of digitization in economy and society, which covers a wide spectrum of digitization processes and consequences, accelerated by the current COVID-19 pandemic, the lockdown scenario, and the increase in digitization by individuals, businesses, and governments. The book explores digital social trends, digital marketing, and the service industry, as well as the societal consequences of technologies and solutions to those problems. The diverse topics include the societal impact of digitization on gender issues, virtual relationships, e-government, online privacy, the gig economy (using Uber as an example), work life changes, online education, online media health public service advertisements, loneliness of the elderly, and more. This book is

essential reading for students and faculty of social sciences, economics, and management technology to understand the broad dimensions of digitization in our everyday life and the theoretical and practical utilization and outcome of digitization.

Plasma Physics Index

This book is written for academic and industry professionals working in the field of sensing, instrumentation and related fields, and is positioned to give a snapshot of the current state of the art in sensing technology, particularly from the applied perspective. The book is intended to give broad overview of the latest developments, in addition to discussing the process through which researchers go through in order to develop sensors, or related systems,

which will become more widespread in the future.
