Year-book of the National
Herbart Society for the
Scientific Study of
Teaching Oxford
University Press, USA
Ziman provides an
informal account of the
rationale of the new
educational trend of
offering science and
technology in society
courses; showing how
many diverse factors are
involved such as social
and cultural objectives,
political ideologies,
vocational needs,
scholarly standards and
institutional capabilities.
The Society for the
Scientific Study of Sex
Rowman Altamira
The noted German
sociologist and
philosopher Georg Simmel
wrote a number of essays
that deal directly with
religion as a fundamental
process in human life.
These essays set forth
Simmel's mature
reflections on religion and
its relation to modernity,
personality, art, sociology,
psychology, philosophy,
and science. They also
include his views on

methods in the study of
religion and his thoughts
on achieving a broader
perspective on religion.
Originally published
between 1898 and 1918,
the last twenty years of
Simmel's life, the essays
are collected here in
English for the first time.
The essays provide an
excellent picture of the
development of the
characteristic doctrines of
Simmel's thought as
applied to religion, based
on phenomenological
analysis of human
experience that
emphasizes the subjective
dimensions of life.

alive and relevant.
A Brief History Rutgers
University Press
The development of
modern science, and its
increasing impact on our
lives and cultures, is one
of the great stories of our
time. So, understanding--
and coming to terms with--
the institution of modern
science should be an
integral part of education.
In *The Many Faces of
Science*, Leslie Stevenson
and Henry Byerly

masterfully, and painlessly, provide the basic information and the philosophical reflection students need to gain such understanding. The authors make good use of case study methods, and they introduce us to dozens of figures from the history of science. Stevenson and Byerly provide an elementary sketch of the development of science through the lives of its practitioners, and they examine the often mixed motives of scientists, as well as the conflicting values people bring to science--and to their perceptions of its impact on society. The authors also explore the relationship between scientific practice and political and economic power. Accessible and rich with anecdotes, personal asides, and keen insight, *The Many Faces of Science* is the ideal interdisciplinary introduction for nonscientists in courses on science studies, science and society, and science and human values. It will also prove useful as supplementary reading in courses on science and philosophy, sociology, and political science. In this second edition of *The Many Faces*

of Science, the authors have updated topics that they explore in the first edition, and they present new case studies on subjects such as HIV and AIDS, women in science, and work done in psychology and the social sciences. The authors also extend their discussion of science and values, in addition to revising their study of science and technology to emphasize changes in scientific practice today. *A Path Forward* Yale University Press
A New York Times Notable Book of 2020 A Bloomberg Best Non-Fiction Book of 2020 A Behavioral Scientist Notable Book of 2020 A Human Behavior & Evolution Society Must-Read Popular Evolution Book of 2020 A bold, epic account of how the co-evolution of psychology and culture created the peculiar Western mind that has profoundly shaped the modern world. Perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich, and Democratic. If so, you're rather psychologically peculiar. Unlike much of the world today, and most people who have ever lived, WEIRD people are highly individualistic, self-

obsessed, control-oriented, nonconformist, and analytical. They focus on themselves—their attributes, accomplishments, and aspirations—over their relationships and social roles. How did WEIRD populations become so psychologically distinct? What role did these psychological differences play in the industrial revolution and the global expansion of Europe during the last few centuries? In *The WEIRDest People in the World*, Joseph Henrich draws on cutting-edge research in anthropology, psychology, economics, and evolutionary biology to explore these questions and more. He illuminates the origins and evolution of family structures, marriage, and religion, and the profound impact these cultural transformations had on human psychology. Mapping these shifts through ancient history and late antiquity, Henrich reveals that the most fundamental institutions of kinship and marriage changed dramatically under pressure from the Roman Catholic Church. It was these changes that gave rise to the WEIRD psychology that would

coevolve with impersonal markets, occupational specialization, and free competition—laying the foundation for the modern world. Provocative and engaging in both its broad scope and its surprising details, *The WEIRDest People in the World* explores how culture, institutions, and psychology shape one another, and explains what this means for both our most personal sense of who we are as individuals and also the large-scale social, political, and economic forces that drive human history. Includes black-and-white illustrations.

Essays on Religion

Chapel Hill : University of North Carolina Press ; London : Oxford University Press
 Robert H. Schuller's ministry—including the architectural wonder of the Crystal Cathedral and the polished television broadcast of *Hour of Power*—cast a broad shadow over American Christianity. Pastors flocked to Southern California to learn Schuller's techniques. The President of United States invited him sit prominently next to the First Lady at the State of the Union Address. Muhammad Ali asked for

the pastor's autograph. It seemed as if Schuller may have started a second Reformation. And then it all went away. As Schuller's ministry wrestled with internal turmoil and bankruptcy, his emulators—including Rick Warren, Bill Hybels, and Joel Osteen—nurtured megachurches that seemed to sweep away the Crystal Cathedral as a relic of the twentieth century. How did it come to this? Certainly, all churches depend on a mix of constituents, charisma, and capital, yet the size and ambition of large churches like Schuller's Crystal Cathedral exert enormous organizational pressures to continue the flow of people committed to the congregation, to reinforce the spark of charismatic excitement generated by high-profile pastors, and to develop fresh flows of capital funding for maintenance of old projects and launching new initiatives. The constant attention to expand constituencies, boost charisma, and stimulate capital among megachurches produces an especially burdensome strain on their leaders. By orienting an approach to the collapse of the Crystal Cathedral on these three

core elements—constituency, charisma, and capital—*The Glass Church* demonstrates how congregational fragility is greatly accentuated in larger churches, a notion we label megachurch strain, such that the threat of implosion is significantly accentuated by any failures to properly calibrate the inter-relationship among these elements.

Routledge

The essays collected in *Situating Spirituality: Context, Practice, and Power* examine not only individual engagements with spirituality, but they show how seemingly personal facets of spirituality, as well as definitions of spirituality itself, are deeply shaped by religious, cultural, and political contexts.

Various articles are presented covering psychological, sociological and cross-cultural topics or relevance to religious/spiritual researchers and academics.

Religion and Science in the Modern Age Farrar, Straus and Giroux
Tradition recognises five social sciences: anthropology, economics, social psychology, sociology, and political science. But who knows what is going on in all five disciplines? Social scientists from one discipline often know little or nothing about the progress made by social scientists from another discipline working on essentially the same social problem. Sometimes, even of a neighbouring discipline is terra incognita. the methodology The problem becomes worse when we widen the remit to natural scientists and engineers. I

have found little evidence myself that they see themselves as standing on the other side of an unbridgeable gulf between two cultures. They observe the intellectual excesses of those few 'newage' social scientists who see themselves fighting a 'science war', but the ignorance of these innumerate critics is so apparent in their grossly naive attacks on natural science, that they are not taken seriously. However, although natural scientists appreciate that most social science is genuine science, they seldom know much about how and why it is done as it is. This can lead to serious inefficiencies in areas in which the traditional frontiers between social and natural science are melting away. An example is the frontier between the economies of imperfect competition and evolutionary biology. Reversing the usual bias, the evolutionary biologists commonly know little mathematics, and hence find the game theory literature hard to read, with the result that they often spend their time re-inventing the wheel.

Strengthening Forensic Science in the United States Forgotten Books

This book takes readers into the Mexican-majority neighborhoods of Santa Ana, California, a city once dubbed the hardest place to live in the U.S. Jonathan E. Calvillo explores the challenges faced by Mexican immigrants in this working-class city, highlighting how faith practices are central to social interactions and community building. How does faith shape residents' sense of ethnic identity? Drawing on five years of participant observation and in-depth interviews, *The Saints of Santa Ana* offers a rich portrait of a fascinating American community.

The Scientific Study of Human Society Harvard University Press

This book provides a sampling of recent field studies of religions in China, along with theoretical reflections by sociologists, anthropologists and religious studies scholars, both inside and outside China, on the revival of the social scientific study of religion in Chinese societies.

Science In Society Oxford University Press

In recent years, political, religious, and other special-interest groups

have waged war on behavioral and social research projects that threaten their interests and values. They have hounded researchers out of universities, cut off their funding through congressional and state legislative pressure, and harassed them with public demonstrations and picketing, all in the hope of forcing them to abandon their research. Formerly such unwanted involvement came from activists on the left. Now it comes from all across the political spectrum, as anti-science attitudes and techniques have diffused throughout society. In addition, conservative and religious forces lobby Congress and state legislatures against funding for major research projects of which they disapprove. This phenomenon represents a grave threat to both scientific freedom and the well-being of modern society. Morton Hunt gives us the first serious overview of this threat to behavioral and social science research. He illustrates precisely how scientific research has been subjected to political attack. The New Know-Nothings illustrates this phenomenon using in-depth case histories and

background discussions of the conflicting social forces involved. It considers the prevalence of each form of opposition to research has been subjected to political attack. The New Know-Nothings illustrates this phenomenon using in-depth case histories and background discussions of the conflicting social forces involved. It considers the prevalence of each form of opposition to research, using interviews with expert observers in the sciences and government. Hunt reviews the nature-nurture debate, biological contributions to gender differences, conservative opposition to sex research in the schools, the debate over the controlled drinking approach to alcoholism, animal rights versus scientists' rights to use animals in research, the controversy over day care, anthropological research needs versus the Native American repatriation of re **Book of Abstracts [of the Twenty-fifth Anniversary Meeting of the Society for the Scientific Study of Religion]** Routledge Scores of talented and dedicated people serve the forensic science community, performing

vitaly important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines,

including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Westview Press

For the most current, comprehensive resource in this rapidly evolving field, look no further than the Revised Edition of the Handbook of Science and Technology Studies. This masterful volume is the first resource in more than 15 years to define, summarize, and

synthesize this complex multidisciplinary, international field. Tightly edited with contributions by an internationally recognized team of leading scholars, this volume addresses the crucial contemporary issues—both traditional and nonconventional—social studies, political studies, and humanistic studies in this changing field. Containing theoretical essays, extensive literature reviews, and detailed case studies, this remarkable volume clearly sets the standard for the field. It does nothing less than establish itself as the benchmark, one that will carry the field well into the next century.

The Yearbook of the National Society for the Scientific Study of Education, Volume 1
National Academies Press

Analyzing the role of journalists in science communication, this book presents a perspective on how this is going to evolve in the twenty-first century. The book takes three distinct perspectives on this interesting subject. Firstly, science journalists reflect on their 'operating rules'

(science news values and news making routines). Secondly, a brief history of science journalism puts things into context, characterising the changing output of science writing in newspapers over time. Finally, the book invites several international journalists or communication scholars to comment on these observations thereby opening the global perspective. This unique project will interest a range of readers including science communication students, media studies scholars, professionals working in science communication and journalists.

Science & Society
Springer Science & Business Media

The fourth edition of an authoritative overview, with all new chapters that capture the state of the art in a rapidly growing field. *Science and Technology Studies (STS)* is a flourishing interdisciplinary field that examines the transformative power of science and technology to arrange and rearrange contemporary societies. *The Handbook of Science and Technology Studies* provides a comprehensive and authoritative

overview of the field, reviewing current research and major theoretical and methodological approaches in a way that is accessible to both new and established scholars from a range of disciplines. This new edition, sponsored by the Society for Social Studies of Science, is the fourth in a series of volumes that have defined the field of STS. It features 36 chapters, each written for the fourth edition, that capture the state of the art in a rich and rapidly growing field. One especially notable development is the increasing integration of feminist, gender, and postcolonial studies into the body of STS knowledge. The book covers methods and participatory practices in STS research; mechanisms by which knowledge, people, and societies are coproduced; the design, construction, and use of material devices and infrastructures; the organization and governance of science; and STS and societal challenges including aging, agriculture, security, disasters, environmental justice, and climate change.

Context, Practice, and Power
Jones & Bartlett Publishers

Written for the undergraduate, majors and non-majors alike taking a foundational course in science, *Science & Society: Thought and Education for the 21st Century* helps students become better consumers of science by showing them how to think like a scientist. Scientific principles are infused with case studies, stories, paradoxes, poetry, medical dilemmas, and misconceptions, all through a lens of skepticism. Throughout the book, provocative science examples are provided that guide students to consider facts more critically. The author exposes readers to research methods, science philosophy, critical thinking strategies, mathematics, and history, and urges them to question data and think scientifically. End-of-chapter questions link to interesting content stimulates debate and discussion in the classroom and this engaging, interdisciplinary approach to learning science leads student to real truths behind many natural phenomena. •End-of-chapter review

questions creatively stimulate discussion and span all levels of Bloom's taxonomy. •The text makes science accessible to a broad range of readers and covers all of the key areas needed for a full understanding of

science. •Questions stimulate debate and discussion and cover science philosophy, history, mathematics, education, research methods, and critical thinking strategies.

•Provides models of reasoning and guidelines and practice activities for thinking critically.
•Presents major themes common to all scientific disciplines in a clear and readable manner for undergraduates
