These are the proceedings of the Third IFIP WG 8.1 Working Conference on the Practice of Enterprise Modeling, held in Delft (The Netherlands) on November 9

and 10, 2010. It followed the success of PoEM 2008 and 2009 (both held in Stockholm), which each attracted over 50 participants from all over the world, representing both industry and academia. This indicates that enterprise modeling (EM) has gained popularity both in the academic community and among practitioners. The interactive format of the previous conferences sparked

constructive interaction between research and practice. PoEM 2010 further strengthened this interaction. The PoEM conferences contribute to establishing a dedicated forum where the use of EM in practice is addressed by bringing together researchers, users and practitioners. The main focus of PoEM is EM methods, approaches, and tools, and how they are used in practice. The goal of the conference was to further a better understanding of the practice of EM and improve the theory behind the practice, contributing to improved EM practice and to the sharing of knowledge. For this third edition, the founders of PoEM, Anne Persson and Janis Stirna, passed the torch for the first time; we hope we lived up to the high standards set by them and thank them for their initiative, commitment, and excellent work. PoEM will return to Scandinavia next year, and will remain to do so every other year.

"Lessons Learned" is a knowledge management approach for organizational learning and improved performance and productivity. However beneficial this approach is, few organizations have been able to implement the processes necessary for organizational success. Utilizing Evidence-Based Lessons Learned for Enhanced Organizational Innovation and Change links the theoretical foundation of the "lessons learned" approach with current tools and evidence-based research in support of organizational development. Outlining best practices and emerging research in organizational learning, this publication is ideal for project managers, academicians, researchers, and upper-level students looking to implement these processes into their project management cycle, particularly in the risk management and quality control processes.

This edited volume showcases work from the emerging field of design-based research (DBR) within social studies education and explores the unique challenges and opportunities that arise when applying the approach in classrooms. Usually associated with STEM fields, DBR's unique ability to generate practical theories of learning and to engineer theory-driven improvements to practice holds meaningful potential for the social studies. Each chapter describes a different DBR study, exploring the affordances and dilemmas of the approach. Chapters cover such topics as iterative design, using and producing theory, collaborating with educators, and the ways that DBR attends to historical, political, and social context.

Round out your technical engineering abilities with the business know-how you need to succeed Technical competency, the "hard side" of engineering and other technical professions, is necessary but not sufficient for success in business. Young engineers must also develop nontechnical or "soft-side" competencies like communication, marketing, ethics, business accounting, and law and management in order to fully realize their potential in the workplace. This updated edition of *Engineering Your Future* is the go-to resource on the nontechnical aspects of professional practice for engineering students and young technical professionals alike. The content is explicitly linked to current efforts in the reform of engineering education including ABET's Engineering Criteria 2000, ASCE's Body of Knowledge, and those being undertaken by AAEE, AIChE and ASME. The book treats essential nontechnical topics you'll encounter in your career, like self-management, interpersonal relationships, teamwork, project and total quality management, design, construction, manufacturing, engineering economics, organizational structures, business accounting, and much more. Features new to this revised edition include: A stronger emphasis on management and leadership A focus on personal growth and developing relationships Expanded treatment of project management Coverage of how to develop a quality culture and ways to encourage creative and innovative thinking A discussion of how the results of design, the root of engineering, come to fruition in constructing and manufacturing, the fruit of engineering New information on accounting principles that can be used in your career-long financial planning An in-depth treatment of how engineering students and young practitioners can and should anticipate, participate in, and ultimately effect change If you're a student or young practitioner starting your engineering career, *Engineering Your Future* is essential reading.
