The aviation industry is being transformed by the use of unmanned aerial vehicles, or drones – commercially, militarily, scientifically and recreationally. National regulations have generally failed to keep pace with the expansion of the fast-growing drone industry. *Aviation Law and Drones: Unmanned Aircraft and the Future of Aviation* traces the development of aviation laws and regulations, explains how aviation is regulated at an international and national level, considers the interrelationship between rapidly advancing technology and legislative attempts to keep pace, and reviews existing domestic and international drone laws and issues (including safety, security, privacy and airspace issues). Against this background, the book uniquely proposes a rationale for, and key provisions of, guiding principles for the regulation of drones internationally – provisions of which could also be implemented domestically. Finally, the book examines the changing shape of our increasingly busy skies – technology beyond drones and the regulation of that technology. The world is on the edge of major disruption in aviation – drones are just the beginning. Given the almost universal interest in drones, this book will be of interest to readers worldwide, from the academic sector and beyond.

Proceedings of SOHOMA 2018 Springer

The Silk Road once served as the vital artery of the ancient world, connecting China to societies across Eurasia, while providing China with immense wealth and prestige. Today, as China's wealth and power is once again on the rise, China is attempting to reaffirm its place at the center of global trade, and to do so, they are undertaking one of the most ambitious projects of modern times. As it is planned, this New Silk Road will use rail lines, highways, pipelines and shipping routes across China, Russia, the Middle East and Central Asia, unifying a region that has been

contested for millennia. Journalist Wade Shepard has travelled the length and breadth of the future Road, from its planned starting point in Xi'an, China, to its outer reaches in Western Europe, and in *On the New Silk Road* he details his insightful observations. Shepard here provides an absorbing account of China's efforts to make the New Silk Road a reality, and its implications for the world as a whole. He argues that the Road represents the focal point of China's plans for an alternative economic order that China hopes will rival or even surpass that of the West. *On the New Silk Road* provides an essential and timely account of a crucial turning point in the history of Asia--and of the world. *Service Orientation in Holonic and Multi-Agent Manufacturing* Cambridge University Press

This book gathers the peer-reviewed papers presented at the 8th edition of the International Workshop “Service Orientation in Holonic and Multi-Agent Manufacturing – SOHOMA’18” held at the University of Bergamo, Italy on June 11-12, 2018. The objective of the SOHOMA annual workshops is to foster innovation in smart and sustainable manufacturing and logistics systems by promoting new concepts, methods and solutions that use service orientation of agent-based control technologies with distributed intelligence. Reflecting the theme of SOHOMA’18: “Digital transformation of manufacturing with agent-based control and service orientation of Internet-scale platforms”, the research included focuses on how the digital transformation, as advocated by the “Industry 4.0”, “Industrial Internet of Things”, “Cyber-Physical Production Systems” and “Cloud Manufacturing” frameworks, improves the efficiency, agility and sustainability of manufacturing processes, products, and services, and how it relates to the interaction between the physical and informational worlds, which is implemented in the virtualization of products, processes and resources managed as services.

Deregulation, privatization and marketization have become the bywords for the reforms and debates surrounding the public sector. This major book is unique in its comparative analysis of the reform experience in Western and Eastern Europe, Australia,

New Zealand and Canada. Leading experts identify a number of key factors to systematically explain the similarities and differences, map common problems and together reflect on the future shape of the public sector, exploring significant themes in a lively and accessible way.

How Our Greatest Invention Makes Us Richer, Smarter, Greener, Healthier, and Happier Springer

Sustainable Logistics and Supply Chain Management is the essential guide to the principles and practices of sustainable logistics operations and the responsible management of the entire supply chain. Based on extensive research by experts in the field, this comprehensive book covers the whole scope of sustainable logistics. The book provides carefully reviewed research-led applications and case studies that have been especially developed for this revised edition with particular attention for use in a teaching context. The mini case studies are highly topical, relating the theoretical concepts to practice and what is actually happening 'on the ground'. Examining the subject in an integrated manner, this book examines all the key areas in sustainable logistics and supply chain management, including: sustainable product design and packaging; sustainable purchasing and procurement; cleaner production; environmental impact of freight transport; sustainable warehousing and storage; sustainable supply management; reverse logistics and recycling; supply chain management strategy, and much more. The book provides an excellent insight into the topic that will help managers, students, and scholars grasp the fundamentals of green supply and logistics management. This revised edition of *Sustainable Logistics and Supply Chain Management* includes valuable supporting online materials, including PPT presentations, chapter summaries, learning objectives, tips for teaching and in class activities.

Shortlisted for the Financial Times and McKinsey Best Book of the Year Award in 2011 “A masterpiece.” —Steven D. Levitt, coauthor of *Freakonomics* “Bursting with insights.” —The New York Times

Book Review A pioneering urban economist presents a myth-shattering look at the majesty and greatness of cities America is an urban nation, yet cities get a bad rap: they're dirty, poor, unhealthy, environmentally unfriendly . . . or are they? In this revelatory book, Edward Glaeser, a leading urban economist, declares that cities are actually the healthiest, greenest, and richest (in both cultural and economic terms) places to live. He travels through history and around the globe to reveal the hidden workings of cities and how they bring out the best in humankind. Using intrepid reportage, keen analysis, and cogent argument, Glaeser makes an urgent, eloquent case for the city's importance and splendor, offering inspiring proof that the city is humanity's greatest creation and our best hope for the future.

A Study in Comparative Economic History Anchor Academic Publishing (aap_verlag)

In 2009, the PRC overtook the USA as the biggest automotive market in the world in production as well as in sales. With economic problems like stagnating real income, rising raw material prices and credit-driven consumerism in the industrial countries the importance of the Chinese market for car companies will even grow. Saturated passenger car markets in the USA and Western Europe and low rates of motorization in new automotive markets like China focus the attention of the market participants on these new, growing markets. The focus of this study is on the passenger vehicle market and lines out why the Chinese market is profitable and attractive for international manufacturers. Moreover, it shows how to deal with the problems and how to use the opportunities regarding the dimensions of internationalization. Firstly, the PEST-Analysis of the Chinese automobile market lines out the political-legal, economic, socio-cultural and technological factors. In such a rapidly changing and growing as well as culturally completely different country like the PRC, the framework conditions and circumstances are of big importance for foreign enterprises willing to do business there. The third chapter deals with possible internationalization strategies for China by showing possibilities of timing and market development strategies plus options for locating business markets. This is also further established in the fourth chapter, in which the internationalization strategies of two German enterprises are analyzed. Furthermore the fourth chapter analyses the internationalization strategies of VW and BMW. At

the end of this thesis, the results are summarized in two SWOT-analyses of both firms including measures on how to deal with threats in the PRC and on how to benefit from strengths and opportunities.

Rationale, Trends and Problems Springer Nature

This book aims at showing how big data sources and data analytics can play an important role in sustainable mobility. It is especially intended to provide academicians, researchers, practitioners and decision makers with a snapshot of methods that can be effectively used to improve urban mobility. The different chapters, which report on contributions presented at the 4th Conference on Sustainable Urban Mobility, held on May 24-25, 2018, in Skiathos Island, Greece, cover different thematic areas, such as social networks and traveler behavior, applications of big data technologies in transportation and analytics, transport infrastructure and traffic management, transportation modeling, vehicle emissions and environmental impacts, public transport and demand responsive systems, intermodal interchanges, smart city logistics systems, data security and associated legal aspects. They show in particular how to apply big data in improving urban mobility, discuss important challenges in developing and implementing analytics methods and provide the reader with an up-to-date review of the most representative research on data management techniques for enabling sustainable urban mobility

Ein Handbuch für Schweizer KMU Springer

В докладах авторы рассматривают новый взгляд на развитие современных транспортных систем: параметры экономической оценки, специфические риски реализация проектов развития железнодорожного транспорта и их финансирование. Рассматриваются вопросы о достоверности экономических расчетов при оценке крупных инфраструктурных проектов, критерии эффективности инвестиций в развитии транспортной системы. Затронута тема конкуренции на рынке транспортных услуг, а также дана экономическая оценка проектов ВСМ: ревизия критериев и их рисков. Результаты конференции будут способствовать выработке обоснованных решений по основным аспектам развития транспортных систем и формированию новых направлений научных исследований транспортной экономики.

Living, Working and COVID-19 W.E. Upjohn Institute

This is the first book to gather leading designers, creators and industry insiders to reflect on sneaker design and its groundbreaking impact on popular culture. Contributors provide insights into the evolution of sneakers from sport-wear to style icons, the processes and people involved in sneaker design and its global future. Through conversations with the people directly involved in the creation of sneakers, it speaks to the the next generation of sneaker designers and wearers by asking: who are the people involved in the design of a sneaker? How do their roles and approaches differ? How does their individual work contribute to the collective effort of making a sneaker? What will the future of sneaker design be? Richly illustrated, it includes iconic sneakers, drawings and sketches, prototypes as well as glimpses in the manufacturing process. Across three chapters - Style and Culture, People and Processes, The Future - the approaches and experience of industry leaders unfold the past, present, and future of sneakers as style icons and cultural facilitators. Contributors turn to the next generation of designers with an open challenge to move the industry towards a more positive direction for both the people and the planet.

This open access book explores supply chains strategies to help companies face challenges such as societal emergency, digitalization, climate changes and scarcity of resources. The book identifies industrial scenarios for the next decade based on the analysis of trends at social, economic, environmental technological and political level, and examines how they may impact on supply chain processes and how to design next generation supply chains to answer these challenges. By mapping enabling technologies for supply chain innovation, the book proposes a roadmap for the full implementation of the supply chain strategies based on the integration of production and logistics processes. Case studies from process industry, discrete manufacturing, distribution and logistics, as well as ICT providers are provided, and policy recommendations are put forward to support companies in this transformative process.

Unmanned Aircraft and the Future of Aviation Alinea Editrice
Na evropských železnicích byla po roce 1993 implementována

reforma, která spočívala ve vertikální (infrastruktura–provoz) a horizontální (nákladní–osobní) separaci odvětví a v umožnění vstupu konkurence na trh železničních služeb. Autor publikace se snaží identifikovat vliv těchto reforem na výkonnost železnice. Projevily se separace kladně, či záporně? Jak se evropské železnice vyrovnaly se vstupem konkurence? Existuje zde rozdíl mezi západoevropskými a východoevropskými státy? Na tyto otázky odpovídá autor prostřednictvím regresní analýzy, provedené na vzorku 27 evropských zemí v období 1995–2011. Ing. Zdeněk Tomeš, Ph.D. je vedoucí Katedry ekonomie na Ekonomicko-správní fakultě Masarykovy univerzity v Brně. Jeho hlavním výzkumným zájmem je ekonomie dopravy.

Proceedings of 4th Conference on Sustainable Urban Mobility (CSUM2018), 24 - 25 May, Skiathos Island, Greece
Routledge

The spread of the Internet into all areas of business activities has put a particular focus on business models. The digitalization of business processes is the driver of changes in company strategies and management practices alike. This textbook provides a structured and conceptual approach, allowing students and other readers to understand the commonalities and specifics of the respective business models. The book begins with an overview of the business model concept in general by presenting the development of business models, analyzing definitions of business models and discussing the significance of the success of business model management. In turn, Chapter 2 offers insights into and explanations of the business model concept and provides the underlying approaches and ideas behind business models. Building on these foundations, Chapter 3 outlines the fundamental aspects of the digital economy. In the following chapters the book examines various core models in the business to consumer (B2C) context. The chapters follow a 4-C approach that divides the digital B2C businesses into models focusing on content, commerce, context and connection. Each chapter describes one of the four models and provides information on the respective business model types, the value chain, core assets and competencies as well as a case study. Based on the example of Google, Chapter 8 merges these approaches and describes the development of a hybrid digital business model. Chapter 9 is dedicated to business-to-business (B2B) digital business models. It shows how companies focus on business solutions such as

online provision of sourcing, sales, supportive collaboration and broker services. Chapter 10 shares insight into the innovation aspect of digital business models, presenting structures and processes of digital business model innovation. The book is rounded out by a comprehensive case study on Google/Alphabet that combines all aspects of digital business models. Conceived as a textbook for students in advanced undergraduate courses, the book will also be useful for professionals and practitioners involved in business model innovation, and applied researchers.

Were you looking for the book with access to MyLab Operations Management? This product is the book alone and does NOT come with access to the MyLab. Buy Operations Management, 8th edition with MyLab Operations Management access card (ISBN 9781292254036) if you need access to the MyLab as well, and save money on this resource. You will also need a course ID from your instructor to access the MyLab. Operations management is important, exciting, challenging ... and everywhere you look! · Important, because it enables organizations to provide services and products that we all need · Exciting, because it is central to constant changes in customer preference, networks of supply and demand, and developments in technology · Challenging, because solutions must be must be financially sound, resource-efficient, as well as environmentally and socially responsible · And everywhere, because in our daily lives, whether at work or at home, we all experience and manage processes and operations.

On the New Silk Road Kogan Page Publishers

This book focuses on novel design and systems engineering approaches, including theories and best practices, for promoting a better integration of people and engineering systems. It covers a range of hot topics related to: development of activity-centered and user-centered systems; interface design and human-computer interaction; usability and user experience; cooperative, participatory and contextual models; emergent properties of human behavior; innovative materials in manufacturing, and many more. Particular emphasis is placed on applications in sports, healthcare, and medicine. The book, which gathers selected papers presented at the 1st International Conference on Human Systems Engineering and Design: Future Trends and Applications (IHSED 2018), held on October 25-27, 2018, at CHU-Université de Reims Champagne-Ardenne, France, provides

researchers, practitioners and program managers with a snapshot of the state-of-the-art and current challenges in the field of human systems engineering and design.

The Geography of Transport Systems McGraw Hill Professional

This product is for beginners. Do you have that entrepreneurial character to start a business? Do you have the characteristics that define a hardworking individual? This booklet is designed to help those who are considering starting a business, but feel they may not be strong enough to handle a business. Many people say that entrepreneurs have to have certain qualifications or characteristics, but that isn't always true. Sometimes, you just have to know what your weaknesses are. This booklet helps those with a dream realize what the necessary characteristics are of an entrepreneur. Available in print and digital versions through links below. *Print version includes work pages for thoughts and ideas* *Triumph of the City* Oxford Business Group

In 2018 the Indonesian economy recorded a growth rate of 5.2%, the highest in five years. This was in spite of a slump in the rupiah and a trade imbalance, and took place against a backdrop of rising US interest rates and deteriorating trade relations between the world's two biggest economies. The country's emphasis on industrialisation and infrastructure development is laying the foundations for continued economic growth. Moreover, the archipelago's growing middle class population, geographical position and human capital development agenda, alongside progress in free-trade agreements, make it a strong contender on the global economic stage. The country holds considerable potential for developing entrepreneurial and creative prowess, already being home to four unicorn startups. Investors have continued to look beyond traditional destinations, with emerging cities like Surabaya and Palembang showing strong possibilities for economic growth. Although the outcome of the April 2019 national election will determine the course of further infrastructure development and tax reforms, the future looks promising, with predictions of continued growth accompanied by stable inflation.

Public Sector Reform A&C Black

Deregulation, privatization and marketization have become the bywords for the reforms and debates surrounding the public sector. This major book is unique in its comparative analysis of

the reform experience in Western and Eastern Europe, Australia, New Zealand and Canada. Leading experts identify a number of key factors to systematically explain the similarities and differences, map common problems and together reflect on the future shape of the public sector, exploring significant themes in a lively and accessible way.

Innovation Atlas : Environmental Technologies in Germany

Emerald Group Publishing

This book sets the stage for understanding how the exponential escalation of digital ubiquity in the contemporary environment is

being absorbed, modulated, processed and actively used for enhancing the performance of our built environment. S.M.A.R.T., in this context, is thus used as an acronym for Systems & Materials in Architectural Research and Technology, with a specific focus on interrogating the intricate relationship between information systems and associative material, cultural and socioeconomic formations within the built environment. This interrogation is deeply rooted in exploring inter-disciplinary research and design strategies involving nonlinear processes for developing meta-design systems, evidence based design solutions and methodological frameworks, some of which, are

presented in this issue. Urban health and wellbeing, urban mobility and infrastructure, smart manufacturing, Interaction Design, Urban Design & Planning as well as Data Science, as prominent symbiotic domains constituting the Built Environment are represented in this first book in the S.M.A.R.T. series. The spectrum of chapters included in this volume helps in understanding the multivalence of data from a socio-technical perspective and provides insight into the methodological nuances involved in capturing, analysing and improving urban life via data driven technologies.
