 You can lose weight like crazy, and you can achieve anything!
 Autumn Calabrese shares the revolutionary step-by-step approach to lose weight that made her one of the top fitness and nutrition celebrities in the world. No cutting corners and no BS: In this book she reveals the personal struggles that shaped her approach to overcome excuses that led to this 30-day plan to succeed at weight loss, and life! Hey there! I'm Autumn Calabrese. I'm a Midwest girl, a single working mom who really had no business being in the business of health and fitness. But I found my passion in helping people achieve their weight-loss and health goals. I turned myself into a mini mega-mogul of nutrition and fitness with two of Beachbody's most successful programs ever: 21 Day Fix and The Ultimate Portion Fix. I've led a crazy life and it's still crazy—probably a lot like yours. I've faced tremendous hardships and disappointments that have deflated my self-confidence. But I've found a way to turn "failures" into "redirections" that have transformed my life. And you can do it, too! Over the past five years, I've helped hundreds of thousands of people finally get control of food and lose 10, 20, 30, even

more than 100 pounds with my breakthrough weight-loss programs. And, now I'm going to do the same for you! Imagine enjoying your favorite CARBS, WINE AND COCKTAILS, AND EVEN CHOCOLATE CAKE and still melt fat to build the lean, fit, healthy body you've always wanted! Here's my proposition: Give me just 30 days of your time, trust my process, GO ALL IN, and see what happens to your body. If you've ever struggled to lose weight before, I know why, and I have the solution. Lose Weight Like Crazy is NOT a DIET. There's Zero Deprivation. It works by automatically controlling your portion sizes, eliminating those unhealthy, sugary processed foods that trigger cravings, and filling you up on a proven ratio of healthy whole foods. It's simple. It's backed by science. And it works. Here's what YOU can expect while you lose weight like crazy: You won't count calories! You won't feel hungry or deprived! You can enjoy dessert! You can have a cocktail with your friends! You can speed up your results by adding fast, fun exercise routines that you'll love! (free lifetime access to my 2 new workout videos included with the book!) You can maintain your new body and feel amazing—for life!

 In Silicon Valley, people routinely dream of changing the world. Some do so. Many more almost do. Almost. It is such a Silicon Valley word. This is the story and lessons learned from 12 electric months in the life of a dreamy San Francisco startup that once thought it would be bought by a technology giant and also seemed on the verge of becoming a nationally-known brand. Neither happened, and the lessons are poignant. Almost...the word hurts the soul. So much effort falling into oblivion. And it keeps happening again and again, this amazing effort that seems part of the DNA of Silicon Valley. Why? What is it there that makes it seem essential to swing for the fences? What is Silicon Valley really like? Here is a fascinating 12-month snapshot inside of one company that almost changed the world.

 Nanobiotechnology is a fast developing field of research and application in many domains such as in medicine, pharmacy, cosmetics and agro-industry. The book addresses the latest fundamental results on nanotoxicology and nanoethics, and the enormous range of potential applications in the fields of medical diagnostics, nanomedicine, and food and water administration. Nanoscale objects have properties leading to specific kinds of behaviour, sometimes exacerbating their chemical reactivity, physical behaviour, or potential to penetrate deeply within living

organisms. Hence it is important to ensure the responsible and safe development of nanomaterials and nanotechnologies. This fourth volume in the Nanoscience series should make its mark, by presenting the state of the art in the fields of nanotoxicology and nanoethics. This is the first book to combine both scientific knowledge and ethical and social recommendations. It also presents specific policies on nanotechnologies set up by national and international authorities. This book is of interest to engineers, researchers, and graduate students.

The Blind Boss & His City Springer Science & Business Media
 The third edition of the Handbook of Proteolytic Enzymes is a comprehensive reference work for the enzymes that cleave proteins and peptides, written by acknowledged experts in the field and containing over 850 chapters. Each chapter is organized into sections describing the name and history, activity and specificity, structural chemistry, preparation, biological aspects, and distinguishing features for a specific peptidase. There are also introductory chapters on peptidase classification and mechanisms and a comprehensive index. For the first time, the Handbook is also available online via Elsevier's ScienceDirect platform as well as a three-volume book. The online version has enhanced options, including online multimedia, cross-referencing capabilities, integrated online delivery and closer integration with the online MEROPS database of peptidases and their inhibitors. This reference work is a must-have for biochemists, biotechnologists, molecular biologists and students in these disciplines, and will be of great interest to pharmaceutical and biotechnology companies. Contains over 830 chapters Covers new research in therapeutics and drug trials Supplies content written by experts in the field

 This textbook introduces the reader to the new and emerging field of Conservation Psychology, which explores connections between the study of human behavior and the achievement of conservation goals. People are often cast as villains in the story of environmental degradation, seen primarily as a threat to healthy ecosystems and an obstacle to conservation. But humans are inseparable from natural ecosystems. Understanding how people think about, experience, and interact with nature is crucial for promoting environmental sustainability as well as human well-being. The book first summarizes theory and research on human cognitive, emotional, and behavioral responses to nature and goes on to review research on people's experience of nature in wild, managed, and urban settings. Finally, it examines ways to encourage conservation-oriented behavior at both individual and societal levels. Throughout, the authors integrate a wide body of published literature to demonstrate how and why psychology is

relevant to promoting a more sustainable relationship between humans and nature.
